

As we have analyzed entire data-set of six stocks for more than three years period, only in very few situations we have best opportunity to either sell or buy that particular stock. Over three year's period time TVS stock price have increased to 100% of its value, Eicher Motors share price has increased to 80% of its value whereas TCS and Infosys share price has decreased to apprx. 75% of their value. Only Bajaj Motors and Hero Motors are nearby to their initial cost value.

I think moving average is the best way to analyze the stocks and by which we can analyze golden cross - Buy signal and death cross - Sell signal and can be sure of whatever trading we do in stock markets is safe, instead of taking riskier decisions.
